

# DIGEST OF MEDICAL AND HEALTH STATISTICS

Produced by:  
State Bureau of Statistics,  
State Secretariat  
Ado-Ekiti

## FOREWORD

The Digest of Medical and Health Statistics, 2017 – 2018 is a secondary source of data gathered from key institutions that makes up the health sector in the State.

As part of regular digest of State Bureau of Statistics, Medical and Health Statistics is aimed at providing Statistical Information for policy makers, researchers, government institutions, corporate organisations and any other users for various purposes of decision making.

Information in the publication is the product of data gathered from key institutions comprising the health sector in the state. The publication is partitioned into nine (9) chapters comprising of reports, analysis tables and graphical presentations for further illustration. Areas covered by the publication are available medical and health facilities, human resources, in-patients, out-patients, discharges and deliveries. Also included are information on major diseases reported in the health facilities, HIV/AIDS cases and public health sector financing in the State

The publication is made possible through the collaborative efforts of relevant MDA's like Ministry of Health, Hospital Management Board (HMB), Primary Health Development Agency (PHCDA), Ekiti State University Teaching Hospital (EKSUTH) and Ekiti State Aids Control Agency (EKSACA) for their prompt response each time we request for information. Our sincere appreciation goes to their officers that assisted us in various ways towards the success of this document including cooperation from the staff of Bureau.

I am confident that this publication will be of great assistance to stakeholders in the health sector. However, useful suggestions and criticism will be welcomed from different users of this document for improvement of future editions.

M. O. Oguntimehin  
The Statistician General,  
Bureau of Statistics  
Ekiti State.

## TABLE OF CONTENTS

## **OBSERVATION**

### **CHAPTER ONE**

Chapter one shows the indicators generated and the summary of all the tables in the publication. Table 1.1 shows key Indicators for the year 2017 and 2018. The table also includes some ratios such as health facility population ratio, doctors /patient facility ratio, nurses and midwives ratio etc. See chapter one for more illustration and understanding.

### **CHAPTER TWO**

#### **NUMBER AND TYPES OF HEALTH FACILITIES IN EKITI STATE AS AT 2018**

Chapter two examines the number and types of medical and health facilities available in Ekiti State as at 2018. From the record made available by the State Ministry of Health as contained in table 2.1, the State had a total of 364 government health facilities as at 2018, comprising of two (2) tertiary, 3 specialist hospitals with one each in the senatorial districts, 18 general hospitals with at least one in each local government of Ekiti State and government house clinic. Other health facilities were distributed across every local government of the State. The State equally had 238 registered private hospitals. See fig 1 for further details

Table 2.2 shows that Ado local government had the highest number of health facilities being 146 (both government and private), this is in tandem with the fact that Ado had largest population in the State. Ijero and Ekiti West had the second largest 39 (6.48%) both of government and private health facilities. Ilejemeje had the least number of health facility of 16 and percentage of 2.66%.See fig 2 for more information.

In terms of Constituency and Senatorial distribution of the public health facilities for the year 2018 table 2.3 reveals that Ekiti Central, comprising of Ado, Irepodun/Ifelodun, Efon, Ekiti West and Ijero had a total of 135 (37.09%) government health facilities, Ekiti North that makes up of Ikole , Oye, Ido/Osi Ilejemeje and Moba local governments had a total of 106 (29.12%) of the health facilities .Also from the same table, the number of health facilities being 123 (33.79%)were located in Ekiti South senatorial district comprising of Ekiti South West, Ikere, Ise/Orun, Ekiti East, Emure and Gbonyin Local Governments in 2018 .Figure 3 and 4 gives further illustration of the distribution on constituency and senatorial district basis.

Table 2.4 gives details of registered number of private and approved patent medicine stores in the State by local government for the year 2017 and 2018. The table shows that Ado local government had 28 registered private pharmaceutical shops and 227 approved medicine stores as at 2017 which increased to 42 and 246 respectively in 2018. From the analysis table 2.5, it could be seen that some local governments did not have registered pharmaceutical shops, yet all had approved patent medicine stores. Apart from Ado the State capital, local governments like Gbonyin Ekiti South West and Ikere had 29, 29, and 27 approved patent stores respectively in 2017. However, there was a sharp increment in the number of pharmaceutical shops in Gbonyin within a space of one year i.e. the number increased from 29 to 40 which accounted for 37.9% increment Irepodun/Ifelodun did not have any registered pharmaceutical shop in 2017 meanwhile its approved number of patent store also increased from 19 in 2017 to 33 in the following year.

The number of beds in the health facilities being a vital aspect of health statistics was also captured for the year 2017 and 2018. According to table 2.5, a total of 2,984 beds that were in good condition were available in all the public health facilities in the State in 2017 but the number dropped 2944 in 2018

The highest percentage of 75.5% number of beds in good condition was found in primary health facility in 2017 and the percentage increased to 76.3% in the following year.

## CHAPTER THREE

### HEALTH HUMAN RESOURCE

The publication also covers information on human resources being a major aspect in the health sector. From table 3.1, it was observed that health personnel in government owned facilities were captured according to their cadres ranging from consultants, medical doctors, dental surgeons, pharmacists, nurses/midwives etc. The table also speak about non-health workers like account staff, typists, messengers and others.

The data was also classified according to the type of health facilities where the officer's functions being primary health facility (PHC), secondary health facility/hospital management board (SHC/HMB), Ekiti State teaching hospital (THF) and State ministry of health. In all, the table revealed that the State had 19 medical consultants, 133 medical doctors, and 20 dental surgeons

The table also show that there were 983 nurses/midwives in which female category takes higher percentage of 86% while that of male is just 14%. See further details in table 3.1 and figure 5.

Table 3.2 shows the distribution of the available consultants in the 4 local governments where tertiary and specialist hospitals were found. Ado local government where Ekiti State teaching hospital is located had the highest number of 7 consultants in 2017 as well 7 consultants in Ikere local government for the two years.

Record of medical doctors who were viewed as being highly essential and in fact life wire in health administration and health care service were captured in table 3.3. From the record, it was observed that out of 133 medical doctors that were in place in 2017 male were 107 while the remaining 26 were females. Also, secondary health facilities has the highest number of medical doctors of 92 (69.17%) followed by the number of doctors in tertiary health facilities being (16.54%) and primary health has the least figure of 13 with percentage of 9.77% and Ministry has 4.51 in the year 2018. Also is very important to note that the state had 20 dental surgeons distributed across the state health facilities.

Table 3.5 and 3.6 presents analysis of the Distribution of Nurses/Midwives by gender and local governments Ekiti East had the least figure of number of nurses/midwives both in 2017 and 2018 while Oye local government had the second highest figure of 75 (6.87%) in the two years. Meanwhile, the number of nurses/midwives who were female in 2017 was 843 (86.55%) the number which increased slightly to 848 (86.26%) in 2018.

Other major personnel considered here were pharmacists, community health officers and record officers. Reference to table 3.7 and 3.8 contained the comparative analysis of some key health personnel by gender and by local governments. Area covered by the table includes consultants, doctors, nurses/midwives, pharmacists/pharmacist asst. /pharmacy. See the tables for further details.

## CHAPTER FOUR HOSPITAL ACTIVITIES

Chapter four examined activities carried out in the public health facilities in Ekiti State for years 2017 and 2018. The activities include In-patients and Out-patients attended to, services rendered, discharges and deaths among others. All the information were also disaggregated by gender, facility and local government.

Table 4.1 shows the distribution of out-patients attended to in the public health facilities by gender and type of facility in the year 2017. It could be seen that, primary health facility had the highest percentage of out- patients being 130,033 out of total figure of 246,208 while secondary and tertiary facilities accounted for (25.5%) and (21.7%) respectively in the year. In terms of gender distribution, 58% of the total out-patients were females while the remaining 42% were males. Table 4.2 figure out-patients in primary, and secondary and tertiary health facilities totalling 102,440 which allocated for 45.24% followed by Ikole with 7.24%. But Ise/Orun had the least percentage of 2.07% out of the total 226,435 out-patients in 2018.

The record of in-patient in government health facilities for the year 2017 was reflected in table 4.3. It reveals that the figures of in-patients that visited primary, secondary and tertiary health facilities respectively were 14.9%, 40.5% and 44.6% of 225,53 being the total in-patients in the year. It was also observed that the figure female of patients almost doubled that of male patients.

Considering table 4.4, Ado local government had the highest number of in-patients being 11, 554 (51.64%), this was followed Ikole (8.26%) and Ikere (7.41%), Ilejemeje had the least being (0.60%).

Table 4.5 shows data on discharges of patients in public health facilities in both 2017 and 2018, It shows that out of total patients figure for (20,198) discharged in 2017, (68.37%) were females and the remaining 31.62% were male but for 2018 female accounted for 91.62% and figure for male was just (8.38%). This could be as a result of the fact that female patients were more than male patients in the facilities during the period. Going by the type of facility, tertiary health facility had the highest percentage (86.13%) while secondary and primary had 3.28% and 10.59% in 2018. Going through tables 4.6 which reflected on the number of discharges by type of facilities, one could observed that Tertiary facilities had the highest figure

9126, which accounted for (46.53%) followed closely by secondary (41.83%) and the least figure in primary that had (11.64%) in 2017. The percentage of discharges in primary, secondary and tertiary health facilities in 2018 were given in table 4.7 thus, 15.17%, 39.03% and 45.80% respectively.

In respect of deaths recorded in the health facilities, table 4.8 reveals a total of 572 deaths in 2017 out of which number of deaths of males were 322 with percentage of 56.29% while the female counterpart was 43.71% and the figure for 2018 was 482 deaths recorded. Table 4.9 and 4.10 gives the figures of recorded deaths in facilities in Ekiti State with tertiary facility having the highest figure of 328 (57.3%) and the least figure of 11 (1.9%) recorded in primary health facilities in 2017. However, there was a sharp reduction in the figure in 2018, from 572 in 2017 to 482 in 2018 which amounted to 15.7% reduction in the figure. Meanwhile, tables 4.11 and 4.12 summarise various activities in the hospital for the years under consideration and their pictorial charts are also presented in fig 7 for further details.

Table 4.13 presents information about eye care services rendered in Ekiti State where a total of 929 patients were attended to in the tertiary facility in the year 2017 with female taking higher percentages of 58.45. The same services were rendered in secondary health facility where 72 males and 100 females were treated for various eye problems, Record shows that 399 (40.80%) male out of 978 and 579 (59.20%) are female. Table 4.15 and 4.16 show more details.

Activities in the dental care centres of the post primary public health facilities in Ekiti State were detailed in tables 4.14 and 4.16. About 50.9% of female were cared for at tertiary facility in 2017 while the figure reduced to 47.76% (2069 out of 4332) in 2018.

## CHAPTER FIVE

### LIVE BIRTHS AND STILL BIRTHS

Chapter Five: This table analysed both live and still births in government owned health facilities in Ekiti State for the year 2017 and 2018. Table 5.1 show that Deliveries that were handled in the primary health facility than in the tertiary health facility. For instance primary health facility recorded about 6,308(66.4%) of the total 9,503 live births while Secondary and tertiary had 1827 (19.2%) and 1368(14.4%) in 2017 respectively. The figure for female live births was more than their male counterpart in both years. While the figure was 46.6% in 2017 it dropped to 46% in 2018. The highest number of lives births of 2,226(28.52%) was recorded in Ado local government as the largest number of live births with 28.52% while Efon was local government has least with 81(1.04%).See table 5.2 for further details.

According to tables 5.3 and 5.4, a total of 193 still births were recorded in 2017 and 148 in 2018. Female still births were higher i.e. 99(51.3%) as against 94(48.7%) males in 2017. Primary, Secondary and tertiary facilities had 10, 85 and 53 recorded respectively in the year 2018.

Further analysis from this table 5.4 shows that high percentage of 39.86% of still births were recorded in Ado local government followed by Ikere local government with 22 (14.86%) while Efon, Ido/osi and Oye local government recorded one translating to (0.68%) still births each out of the total 148 still births. See fig 8 and 9 for more illustration.

Table 5.5 shows details of maternal deaths recorded in health facilities by type of facility and local government. There was no material death recorded in primary health facility in the two years. However, only four (7) deaths were recorded in both secondary and tertiary health facility in each of 2017 and only in secondary health facility in 2018.

According to the record given in 2017 which gives information about registered infants death in public health facilities with the data being disaggregated by the gender and local government. Just as the record showed that no maternal death was recorded in all the primary health facilities in the state. As high as 209 total infants death was recorded in 2017 but the figure decreased to 142 in the following year.

## CHAPTER SIX

### IMMUNIZATION

Chapter six show details of immunisation given to children under 1year of age, this immunisation is of different type such as BCG Polio, Pentals, Measles and Yellow fever and taking in different stages (i.e. stage 1 to 5). Table 6.3 show the number children fully immunized by sex and by local government.

See table 6.1 and table 6.2 for more explanation while table 6.3 show summary of all the tables.

## CHAPTER SEVEN

### RECORD OF PREVALENT DISEASES REPORTED IN HEALTH FACILITIES

Chapter seven covered record of diseases prevalent in the State's health facilities for 2017and 2018.

Table 7.1 show the summary table of malaria cases reported in public health facilities in Ekiti State for the year of 2017 and 2018. From this table, primary health facility had the highest percentages of 81.84%, secondary had 16.19 and tertiary had only 1.96%. of reported malaria cases

For the year 2018 primary health facilities had the highest percentage of 72.32%, secondary had 24.58% and tertiary had only 3.10%. Classification by gender show that female had highest percentage of 60.97% and male had 39.03%. While for 2018, the classification by gender show that female had the highest percentage of 60.44% and male had 39.56%

Table 7.2 contains information on malaria cases classified by type of health facility, gender and local government. The data gathered, revealed that for 2017, primary health facilities had the total of 48426 malaria cases were reported with female having the highest prevalence with 68348. Secondary health facilities had 15677 and tertiary had 1101.

Also, for primary health, ilejemeje local government has highest number of malaria cases reported, in secondary health facilities Ikole local government had the highest number of malaria cases reported and in tertiary Ado local government had the largest number of malaria cases reported. See table 7.2 and 7.3 for more information.

Record of Typhoid malaria cases reported in public health facilities in Ekiti state was detailed in table 7.5 and 7.6 for the two years. The tables reveals that the disease was mostly reported at the secondary health facility. For instance 31 cases (0.6%) were reported at primary health facility and 6 (0.1%) of such cases were treated at the tertiary health facility. The situation was different in 2018 with the analysis given in table 7.6

Where 3758 (43.47%) were such cases reported at primary health facility still the percentage of recorded typhoid cases at tertiary health facility stood at 0.1%.

Reported cases of malaria in pregnancy in health facilities across the 16 local government was contained in table 7.8 shows that 868 (62.6%) of the cases were treated at the primary health facility while 30(2.2%) came from tertiary health facility in 2017. However, 475 (47.8%) cases of malaria in pregnancy were handed at secondary health facility in 2018. The figure increased to 497 (50.1%) at primary health facility in the year.

Cases of reported measles In public health facilities of Ekiti state were contained in tables 7.11 and 7.12 for the two years. Besides Ado local government being the state capital with highest figure of 37 (28.24%) in 2017 and 87 (42.86%) in 2018, Emure local government seems to have a high figure of 17 (12.98%) and 27 (13.30%) in 2017 and 2018 respectively. Ise/orun, Ekiti west and Ekiti south west local governments had no record of measles cases in 2017 but the situation was not the same in 2018 where the same local governments now had 33,6 and 2 of such cases respectively.

Tables 7.16 gives summary in details of diabetes cases reported in different levels of health facility in Ekiti state for year 2017 and 2018. More than 80% of the cases were reported at secondary health facility in the years. The problem seems to be prevalent among women than men. About women 1596(67.23%) and 1617 women (68.8%) were affected in 2017 and 2018.

Hypertension cases reported in government owned health facility in the state was given according to table 7.20. Ikole local government had the highest figure of 1,230 (16.39%) in 2017 while the least figure of 81 (1.08%) was recorded in Efon local government.

Further analysis from table 7.21 reveals that 4655 female that amounted 69.8% were affected in 2018. Ikole local government still had a highest figure of 1422 (21.31%) followed by ado local government with 961 (14.4%).

Table 7.23 contains information about case of heart failure reported in health facilities in the state in 2017. While only 5 cases (11.1%) were reported in secondary health facility as high as 40 (88.9%) case were noted in tertiary health facility. It was mostly of note and concern that the figure increased to 92 in 2018 involving 56 (60.9%) women and 36 (39.1%) men. Heart failure cases reported in tertiary health facility in 2018 was 78 (84.8%) as noted in table 7.24.

The total number of tuberculosis cases reported in public health facilities disaggregated by gender and local government was presented in table 7.26, where 038 (62.9%) female out of 1491 were affected in 2017 but the figure increased to 435 (68.2%) Of 638 in 2018.

Summary of diarrhoea cases reported in Ekiti public health facilities were detailed in table 7.28, which presented that 1038 (75.6%) and 376 (55.5%) of the cases were handled at the primary level of health facilities across the state for the years.

Sexual transmitted diseases in the year 2017 and 2018 see table 7.32, 7.33 and table 7.34.

## **CHAPTER EIGHT**

### **HIV/AIDS**

Report on HIV/AIDS in public health facilities were contained in this chapter. The record shows that non-pregnant people tested more positive to the disease than pregnant women or men.

For example, 704 (60.4%) and 570 (58.2%) non-pregnant people were tested positive as detailed in the 8.1 and 8.2.

Table 8.5 shows that above 2.5% of female in the state were tested for HIV/AIDS in 2017 while the percentage increased to above 3.8% in the following year.

Table 8.10 presents health institutions with HIV/AIDS diagnostic facility in the state both public and private. The record shows that the primary health facility was equipped with the facility than others, while only 12 (7.9%) of private health facilities Had the equipment in the state.

## **CHAPTER NINE**

Chapter nine presents Ekiti state financial commitment to health sector only 6.53% of the approved budget was accessed in 2017 while the figure reduced to 4.16% in the following year. Percentage of actual money expended on health sector in 2017 was 7.15 while the percentage stood at 3.2 in 2018.
